# Sofia Update

Petya Osenova

# BURGER

- Similarly to the last year, the work was devoted to the lexicon extension
- The main activity is further cleaning and specifying in more detail the verb valency types
- There are more than 20 000 verbs from the BURGER lexicon available through the MultiVal lexicon search tool

# Multilanguage Valency Patterns

Version 1.4 (for further guidelines, see Info)

Languages:

| Verb id | razbiram_v1 |
| Syntactic Arguments | NP |
| FCT | transitive |
| SIT | imperfective |
| Aspect | |
| Verb type | v_np_i_le |
| Example of type | зная 'znaya_v2' (to know), чета 'cheta' (to read) |
| Orthography | разбирам |

# What next? (my thoughts…)

- If a *toy version (with small number of verbs and rules)* is used (there is an svn version with excluded rules and big lexicon, kindly provided by Lars Hellan)
  - How to work on the coverage and introduction of new types?
  - How to develop a big grammar?
- Solution (current work)
  - To cross-evaluate which rules cover the most frequent verbs (and frames) and to provide a lighter version with *irules*. Then to use the svn version, enriched only with part of the rules.
