VU University Amsterdam site update

Last year

- Thesis finished and defended :-)
- No other DELPH-IN related research :-(
- But there’s hope for the coming year…

Coming year

- Personal Grant for proposal:

  Reading between the lines: identifying implicit perspectives through linguistic analyses

- The project does not involve developing DELPH-IN tools and resources, but it will use them

- Travel to DELPH-IN summit taken up in the budget

Reading between the lines

- The project in a nutshell:
    - A micro-portrait is an overview of everything that is said about an entity in a text
      (e.g. what did a person do and what characteristics does (s)he have?)
    - Practically: a collections of predicate-argument structures and properties associated with an entity.
    - The project will aim to collect micro-portraits from large amounts of text and investigate how this can be used in digital humanities and digital social science
