Singapore, August 3, 2015

A web application for automatic syntactic analysis

- 3-year project
- The application will
  - take a sentence as input
  - parse it
  - give as output the kind of analysis that is requested by the student

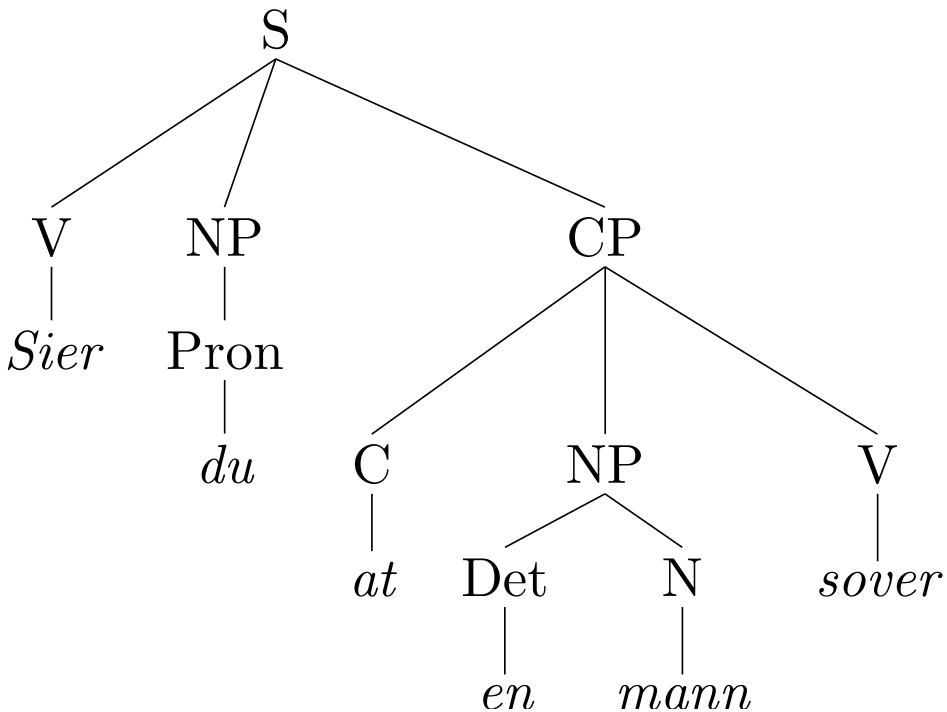

Example 1 – Functional analysis

S				
Verbal	Subject	Direct object		
		Sbu	Subj	Verbal
Sier	*du*	*at*	*en mann*	*sover*

Example 2 – Field analysis

Vorfeld	Mittelfeld			Nachfeld		
	v	n	a	V	N	A
	Sier	*du*			*at en mann sover*	

Eksempel 3 – Tree analysis

Plan

- Lexicon
  - Converting the Norwegian LFG lexicon (NorGram) into an HPSG lexicon
- Statistical model
  - Parsing treebanked sentences from the INESS Norwegian LFG treebank project with Norsyg
  - Comparing dependency structures and create a HPSG treebank
- Application
  - Using the TypeCraft infrastructure in Trondheim
- Cooperation:
  - Lars and Dorothee
  - Stephan
  - (Mathieu)

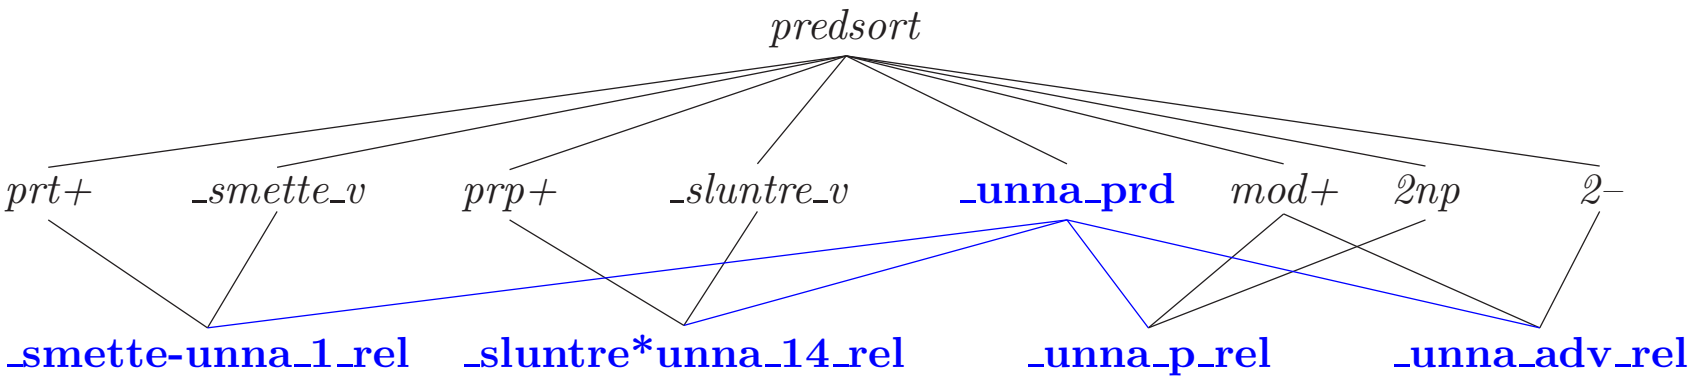

Major redisign of Norsyg

A second step towards unique lexical items:

- Associating types with category-specific rules
  - subject NPs
  - object NPs
  - objects introduced by complementizers
  - objects introduced by infinitival markers
  - selected prepositions
  - particles
  - adverbs/modifying prepositions
  - idiomatic nouns
- Assigning types to function words and idiomatic words

A hierarchy of atomic construction types determines what constructions can be formed

Simplified type hierarchy under *_unna_prd*

The word *unna* ('away')

(1) a. Han kjørte unna.
he drove away(ADV)
He drove out of the way.

b. De gikk unna flammene.
they walked away(P) flames-DEF
They walked away from the flames.

c. Han smatt unna.
he escaped away(PRT)
He escaped.

d. Han sluntret unna pliktene sine.
he idled away(Psel) duties his
He shirked his duties.
