

New supertaggers for the ERG for the DELPH-IN summit

Olga Zamaraeva & Carlos Gómez-Rodríguez
Department of Informatics/CITIC, Universidade da Coruña
June 28 2023

Supertagging helps eliminate unlikely possibilities:

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

Experiments

References

► Without tagging:

- orthographies are mapped to all possible lexical entries
- parser has to consider each possibility
- charts become too big

1

2

Supertagging is useful for e.g. :

- ▶ word sense disambiguation
- ▶ parse ranking
- ▶ improving parsing speed

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Supertagging accuracy is important

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

Experiments

References

- If a wrong lexical type is predicted:
 - the chances of getting the parse right are 0

1

2

Prior work on supertagging for HPSG

New supertaggers
for the ERG

model	grammar	training tok	tagset size	speed-up factor
N-gram (Prins and van Noord 2004)	Alpino (Dutch)	24 mln	1365	2
HMM (Blunsom 2007)	ERG (English)	113K	615	8.5
MEMM (Dridan 2009)	ERG (English)	158K	676	12

- ▶ Dridan (2009):
 - ▶ 92% accuracy on in-domain data
 - ▶ 74.6% out of domain (up to 80.8% with additional training data)
- ▶ Recent work on CCG (Liu et al. 2021):
 - ▶ 95.5% accuracy in domain
 - ▶ 81% and 92.4% on two out-of-domain datasets

Experiments with ERG

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

Experiments

References

- ▶ 2022:
 - ▶ Supertagging (no ubertagging)
 - ▶ Single tag accuracy (top 1)
- ▶ 2023:
 - ▶ Started integration into ACE
 - ▶ Added fine-tuned BERT

dataset	description	sent	tok	train tok	MaxEnt	SVM	NCRF++	BERT	D2009

Preliminary Spanish experiments

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

Experiments

References

- ▶ Spanish treebanks are much smaller and 'gold' is of lower quality
- ▶ Accuracy of the NCRF++ supertagger in the 70%s
 - ▶ BERT will be better but probably not much
- ▶ Will try to do some multilingual training
 - ▶ ...and also improve the Spanish treebanks

Integration into ACE

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

Experiments

References

- ▶ For now:
 - ▶ Oracle-style experiments for effects on parsing speed
 - ▶ ACE gets list of supertags for each sentence
 - ▶ eliminates edges with wrong lexical type
- ▶ Not sure for now how to integrate the model itself for new input

Example (not a fair comparison!)

New supertaggers
for the ERG
for the DELPH-IN
summit

Introduction

Baseline

Experiments

References

No tagging:

SENT: Abrams heard barks.

NOTE: 5 readings, added 1194 / 315 edges to chart (124 fully instantiated, 89 actives used, 92 passives used) RAM: 3975k

NOTE: parsed 1 / 1 sentences, avg 3975k, time 0.02536s

Ubertagging:

NOTE: 3 readings, added 1133 / 258 edges to chart (101 fully instantiated, 83 actives used, 73 passives used) RAM: 3661k

NOTE: parsed 1 / 1 sentences, avg 3661k, time 0.02434s

BERT oracle supertags:

NOTE: 3 readings, added 1052 / 177 edges to chart (73 fully instantiated, 78 actives used, 50 passives used) RAM: 3413k

NOTE: parsed 1 / 1 sentences, avg 3413k, time 0.02154s

Summary

- ▶ Some progress on supertagging since last year
 - ▶ added BERT
 - ▶ started integrating with ACE
 - ▶ tried training a supertagger for Spanish
